Feedback for Boxiong and Yifei from Eli and Caroline

Introduction and data:
- Definition of CCU could be helpful for a more general audience
- Maybe could be beneficial to add in relevant variable descriptions in the introduction, I was a little unclear on what each variable does/represents throughout the code
- Add a formal data citation at the end

Methodology:
- There are no additional visualizations to show the connection between variables
- Could be beneficial to add in a description of the one graph right below it (a caption) to describe what it means
- The justifications for models used is in the results section rather, could be good to move it to the methodology section

Results:
- Make sure to add in and label table 1
- The main research question has not been addressed though the work has clearly been done

Discussion:
- Very well done

Formatting:
- Add in code chunk labels/ comment more code from the start of the methodology section through the start of the pipeline to make clear the flow

General:

Final Considerations:
- The Ethical concerns section was really strong, good interesting ideas, and a good discussion of potential errors
- Why did you choose to use two separate models rather than just focusing on one?
